

## Become a WOLL

### What are WOLLs?

Water-Oriented Living Labs are multi-stakeholder collaboration environments created to address clearly defined water-related challenges. They bring together actors from the quadruple helix to develop, test, validate, and demonstrate water-smart solutions in real-life environments, supporting water security and systemic transformation.

- **How will you be supported?**

Within Water4All, Demonstration Activities support both established WOLLs and promising initiatives that are willing to further develop their maturity as Water-Oriented Living Labs.

Interested entities are invited to submit an application, which a dedicated task force will review. Mature initiatives will be included in the Water4All WOLLs Network, while promising initiatives that are not yet fully mature will receive guidance and support through a maturity development process

- **Who are we looking for?**

We are looking for existing or emerging initiatives working on water-related challenges, involving multiple stakeholders and showing the ambition to develop or strengthen their role as Water-Oriented Living Labs. This may include public authorities, research organisations, universities, utilities, companies, clusters, associations, NGOs, and multi-stakeholder partnerships.

- **Why participate?**

Selected initiatives will have the opportunity to connect with the Water4All WOLLs community, exchange experiences with peers, increase their visibility, and contribute to a European network supporting water-smart solutions and long-term water security.

Through the Network, Pillar D Activities aim ([learn more here](#)) to strengthen collaboration among WOLLs, foster mutual learning, support the demonstration and uptake of innovative solutions, and create stronger links between problem owners, solution providers, and other relevant stakeholders.

By joining the network, participants will also contribute to building a critical mass of WOLLs able to provide evidence, share needs and priorities from the ground, and support a stronger dialogue with the European Commission and other relevant European actors.

- **How to apply?**

Interested organisations and initiatives are invited to complete the application documents

Apply now and become part of the Water4All WOLLs Network!
